13. ABSTRACT (Maximum 200 words) <p>This report lists publications, patents, presentations and honors relating to an ONR sponsored research grant on Mobile and Wireless Communications. The investigation develops new techniques for mobile and wireless communication systems as well as performance evaluation models and tools. Configurations that support a mixture of mobile platform types and mixed types of telecommunications traffic are emphasized. Channel assignment and cellular layout strategies are investigated and an analytical framework based on multi-dimensional birth-death processes is developed to encompass a broad range of relevant issues. Specific topics include consideration of new channel borrowing schemes, mixed satellite and terrestrial systems and methods that support platforms with differing mobilities and mixed teletraffic sources, such as data, voice and images.</p> <p style="text-align: center; font-size: 2em;">19960627 005</p>
